**10 NEW WAYS TO LAY
WALL AND FLOOR TILES**

TILE PATTERNS

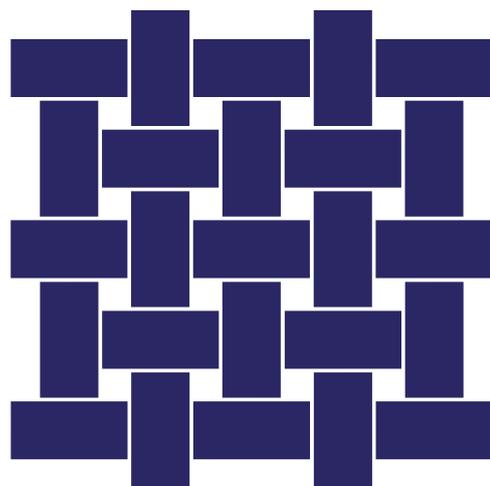

One of the most talked about trends in tiles at the moment is all about pattern play. While there's certainly nothing wrong with tiling in a standard format, by taking into account the grout lines and negative space created when placing typical rectangular or square shapes near each other, you can create a rather statement-making display on your walls or floors.

Some of these you may already be familiar with – in fact, brick bond and herringbone patterns have been around for millennia but they can still look very fresh and new depending upon the tiles you use and the grout chosen along with them. If you are looking for ideas on making even the simplest tiles stand out, you've come to the right place.

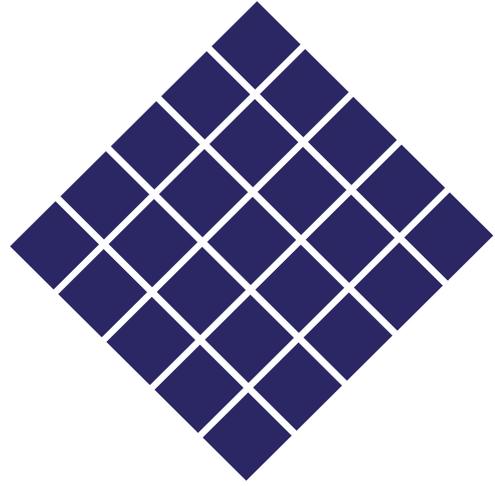

Any of these patterns can be created whether you are using [wall tiles](#) or [floor tiles](#) – the only real limit is your imagination.

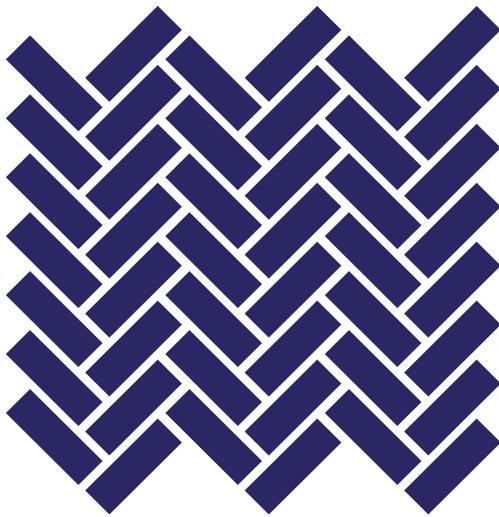

1/3 Staggered Brick Bond
1 x 3 tile

Basketweave
2 x 2 tile

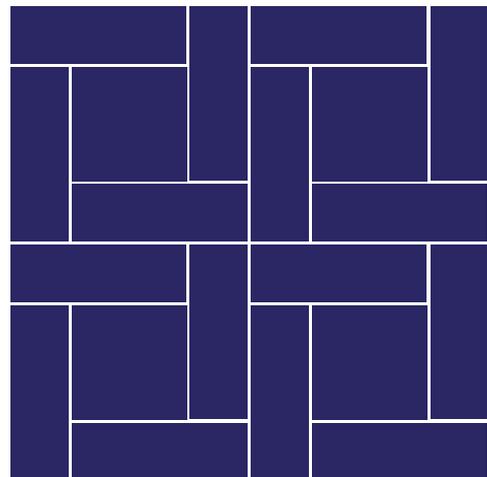

Diamond
1 x 1 tile

Herringbone
1 x 3 tile
