Adesilex P9

Polymer modified enhanced cementitious adhesive with no vertical slip and extended open time for ceramic tiles

CLASSIFICATION IN COMPLIANCE WITH EN 12004
Adesilex P9 is an improved (2) slip resistant (T) cementitious adhesive (C) with extended open time (E) classified as C2TE.

Adesilex P9 is CE marked, as declared in ITT certificate N° 54680102.101 (SFV) issued by the Säurefliesner-Vereinigung E.V. Grossburgwedel laboratory (Germany).

WHERE TO USE
Interior and exterior bonding of ceramic tiles and mosaics, on floors, walls and ceilings. Also suitable for spot bonding of insulating materials such as expanded polystyrene, rock and glass wool, Eraclit® (wood-cement panels), sound-deadening panels, etc.

Some application examples
- Bonding ceramic tiles and mosaics on the following substrates:
  - Conventional renders or cementitious mortar walls.
  - Interior aerated concrete block walls.
  - Gypsum or anhydrite after having first applied Primer G.
  - Gypsum board.
  - Underfloor heating installations, only with tiles less than 300x300 mm.
  - Cementitious screeds, as long as they are sufficiently cured and dry.
  - Interior painted walls, as long as the paint is firmly anchored and resistant to alkalis.
- Tile on tile of existing flooring with tiles up to 300x300 mm.
- Bonding small format tiles in swimming pools and basins.

TECHNICAL CHARACTERISTICS
Adesilex P9 is a grey or white powder composed of
cement, fine-graded aggregates, synthetic resins and special additives developed in the MAPEI Research and Development Laboratories. A mortar with the following features is obtained when mixed with water:

- Easily workable.
- Highly thixotropic; Adesilex P9 can be applied on a vertical surface without sagging or slipping even with heavy tiles.
- Perfect adherence to all materials normally used in building.
- Hardens without minimal shrinkage.
- Extended open time.
- Water and frost resistant.

RECOMMENDATIONS
Do not use Adesilex P9:
- On precoat and poured concrete walls.
- On walls or floors subject to deformation or vibration (wood, fibre-cement, etc.)
- On metal surfaces.
- For installations that require an adhesive strength greater than 5 mm.

APPLICATION PROCEDURE
Preparing the substrate
All substrates must be flat, sound, free of loose parts, grease, oils, paints, wax, etc. Cementitious substrates should not continue to shrink after the installation of the ceramic tiles. Renders must cure at least 2 weeks and cementitious screeds must be cured at least 3-4 weeks, unless special MAPEI binders for screeds such as Mapecem, Mapecem Pronto, Topcem or Topcem Pronto have been used. Dampen the surfaces with water to cool down if they should be too warm or exposed to direct sunlight. Gypsum substrates and anhydrite screeds must be perfectly dry (max. residual moisture 0.5%), sufficiently hardened and free from laitance. It is essential that they be treated with Primer S or Mapeprim SP. In areas subject to dampness prime the substrate with Primer G.

Preparing the mix
Mix Adesilex P9 with clean water until a smooth, bump-free paste is obtained. Leave to rest approximately 5 minutes and re-stir. Use 25-30 parts water for every 100 parts by weight of Adesilex P9, which is equal to 5.2-6.0 litres of water for every 20 kg of powder.

Mixed this way, Adesilex P9 has a pot life of approximately 8 hours.

Applying the mix
Adesilex P9 is applied to the substrate using a notched trowel. Choose a trowel in order to achieve 65-70% coverage of the back of the tiles for internal walls and 100% for floor areas and all external works/wet areas. To obtain good adhesion, spread a first thin layer of Adesilex P9 on the substrate using the straight edge of the trowel. Immediately, apply the necessary thickness of Adesilex P9 using a suitable notched trowel, depending on the type and size of the tiles (see “Consumption”). For external tiling and when applying in swimming pools and basins filled with water, spread the adhesive on the back of the tile (back-butttering) in order to ensure complete contact.

Installing the tiles
Do not wet the tiles before installing. Only when dusty is it recommended to dip the tiles in clean water. Dry before fixing. Tiles should be installed with a firm pressure to ensure good contact with the adhesive. In normal temperature and humidity conditions, the open time of Adesilex P9 is approximately 30 minutes. Unfavourable weather conditions (strong sun, drying wind, high temperatures, etc.) or a highly absorbent substrate can reduce the open time to just a few minutes. It is therefore necessary to check carefully in order to ensure that a skin has not formed on the surface of the adhesive. If not, re-freshen the adhesive by re-spreadring with a notched trowel.

It is not recommended to wet the adhesive with water once a skin has formed because, the water will form an anti-adhesive film. If necessary, tiles should be adjusted within 60 minutes after installation. Tiling installed with Adesilex P9 must not be washed or exposed to rain for at least 24 hours and must be protected from frost and strong sun for at least 5-7 days.

GROUTING AND SEALING
Wall joints can be grouted after 4-8 hours and floor joints can be grouted after 24 hours with the relevant MAPEI cementitious or epoxy grouts, available in different colours. Expansion joints must be sealed with the relevant MAPEI sealants.

Spot-bonding insulating materials
For spot-bonding sound-deadening or insulating panels, apply Adesilex P9 with a trowel or a float.

LIGHT FOOT TRAFFIC
Floors are able to take light foot traffic after approximately 24 hours.

READY FOR USE
Surfaces are ready for use after approximately 14 days. Basins and swimming pools can be filled after 21 days.

Cleaning
Tools and containers should be cleaned with plenty of water while Adesilex P9 is still fresh. Surfaces should be cleaned with a damp cloth, before the adhesive dries.

CONSUMPTION
Bonding ceramic tiles
- Mosaics and small sizes in general (trowel n. 4): 2 kg/m²
- Normal sizes (trowel n. 5): 2.5-3 kg/m²
- Large sizes, exterior floors (trowel n. 6): 4 kg/m²

Spot-bonding insulating material
- Foam, etc.: approx. 0.5-0.8 kg/m²
- Gypsum board panels, foamed concrete: approx. 1.5 kg/m²

PACKAGING
Adesilex P9 white and grey are available in 20 kg bags and in 4x5 kg boxes.
### TECHNICAL DATA (typical values):  
In compliance with:  
- European EN 12004 as C2TE  
- DIN 18156-M  
- European UEAlc  
- BS 5980-1980 type 1 class AA  
- American ANSI A 118.4 – 1999  
- Canadian 71 GP 30 M type 2

| Hazard classification according to EC 99/45: | irritant.  
Before using refer to the “Safety instructions for the preparation and application” paragraph and the information on the packing and Safety Data Sheet |
| Customs class: | 3824 50 90                  |

### APPLICATION DATA at +23°C and 50% R.H.

| Mixing ratio: | 100 parts Adesilex P9 White with 28-30 parts water by weight.  
100 parts Adesilex P9 Grey with 26-28 parts water by weight. |
| Consistency of mix: | creamy paste               |
| Density of the mix (kg/m³): | 1500                        |
| pH of mix:      | 13                           |
| Pot life:       | over 8 hours                |
| Application temperature: | from +5°C to +40°C           |
| Open time (acc. EN1346): | 30 minutes                 |
| Adjustability time: | approx. 60 minutes          |
| Ready for grouting on walls: | after 4-8 hours depending on absorbency |
| Ready for grouting on floors: | after 24 hours              |
| Set to light foot traffic: | 24 hours                   |
| Ready for use:  | 14 days                     |

### FINAL PERFORMANCES

| Bonding strength in compliance with EN 1348 (N/mm²): |  
- initial bonding after 28 days: 1.8  
- bonding after heat exposure: 1.8  
- bonding after immersion in water: 1.1  
- bonding after freeze/thaw cycles: 1.5 |
| Resistance to alkali: | excellent                        |
| Resistance to oils:  | excellent (poor to vegetable oil) |
| Resistance to solvents: | excellent                      |
| Temperature when in use: | from –30°C to +90°C             |
STORAGE
Adesilex P9 can be stored 12 months in a normal environment in original packaging. Manufactured in compliance with the regulations of the 2003/53/EC Directive.

SAFETY INSTRUCTIONS FOR THE PREPARATION AND APPLICATION
Contains cement that when in contact with sweat or other body fluids produces an irritant alkaline reaction and allergic reactions to those predisposed. Use protective gloves and goggles.
For further information, consult the safety data sheet.
